Safety Information

Electrical safety

- To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.
- When adding or removing devices to or from the system, ensure that the power cables for the devices are unplugged before the signal cables are connected. If possible, disconnect all power cables from the existing system before you add a device.
- Before connecting or removing signal cables from the motherboard, ensure that all power cables are unplugged.
- Seek professional assistance before using an adapter or extension cord. These devices could interrupt the grounding circuit.
- Make sure that your power supply is set to the correct voltage in your area. If you are not sure about the voltage of the electrical outlet you are using, contact your local power company.
- If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your retailer.

Operation safety

- Before installing the motherboard and adding devices on it, carefully read all the manuals that came with the package.
- Before using the product, make sure all cables are correctly connected and the power cables are not damaged. If you detect any damage, contact your dealer immediately.
- To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.
- Avoid dust, humidity, and temperature extremes. Do not place the product in any area where it may become wet.
- Place the product on a stable surface.
- If you encounter technical problems with the product, contact a qualified service technician or your retailer.

Caution! The symbol of the crossed out wheeled bin indicates that the product (electrical and electronic equipment) should not be placed in municipal waste. Check local regulations for disposal of electronic products.

Certifications

FCC

This device complies with the requirements in part 15 of the FCC rules: Operation is subject to the following two conditions:

- This device may not cause harmful interference,
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this device in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense. The user is advised that any equipment changes or modifications not expressly approved by the party responsible for compliance would void the compliance to FCC regulations and therefore, the user's authority to operate the equipment.

Caution! *There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.*

Technical Support

If a problem arises with your system and no solution can be obtained from the user's manual, please contact your place of purchase or local distributor. Alternatively, please try the following help resources for further guidance. Visit the Advantech website for FAQ, technical guide, BIOS updates, driver updates, and other information:

<http://support.advantech.com.tw/Support/default.aspx>

Packing List

Before you begin installing your single board, please make sure that the following materials have been shipped:

- 1 x GMB-910 (910GMLE) Mini ITX Main board
- 1 x CD-ROM contains the followings:
 - User's manual (this manual in PDF file)
 - Drivers
- 2 x COM cable
- 1 x Startup Manual
- 1 x I/O Shield

If any of the above items is damaged or missing, please contact your retailer.

Chapter 1

Product Introduction

This chapter describes the main board features and the new technologies it supports.

1.1 Before You Proceed

Take note of the following precautions before you install motherboard components or change any motherboard settings.

Caution!

- *Unplug the power cord from the wall socket before touching any component.*
- *Use a grounded wrist strap or touch a safely grounded object or a metal object, such as the power supply case, before handling components to avoid damaging them due to static electricity*
- *Hold components by the edges to avoid touching the ICs on them.*
- *Whenever you uninstall any component, place it on a grounded antistatic pad or in the bag that came with the component.*
- *Before you install or remove any component, ensure that the ATX power supply is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, and/or components.*

1.2 Motherboard Overview

Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it. Refer to the chassis documentation before installing the motherboard.

Warning!

Make sure to unplug the power cord before installing or removing the motherboard. Failure to do so can cause you physical injury and damage motherboard components.

1.2.1 Placement Direction

When installing the motherboard, make sure that you place it into the chassis in the correct orientation. The edge with external ports goes to the rear part of the chassis as indicated in the image below.

1.2.2 Screw Holes

Place four (4) screws into the holes indicated by circles to secure the motherboard to the chassis.

Caution! Do not over tighten the screws! Doing so can damage the motherboard.

Place this side towards the rear of the chassis.

1.3 Motherboard Layout

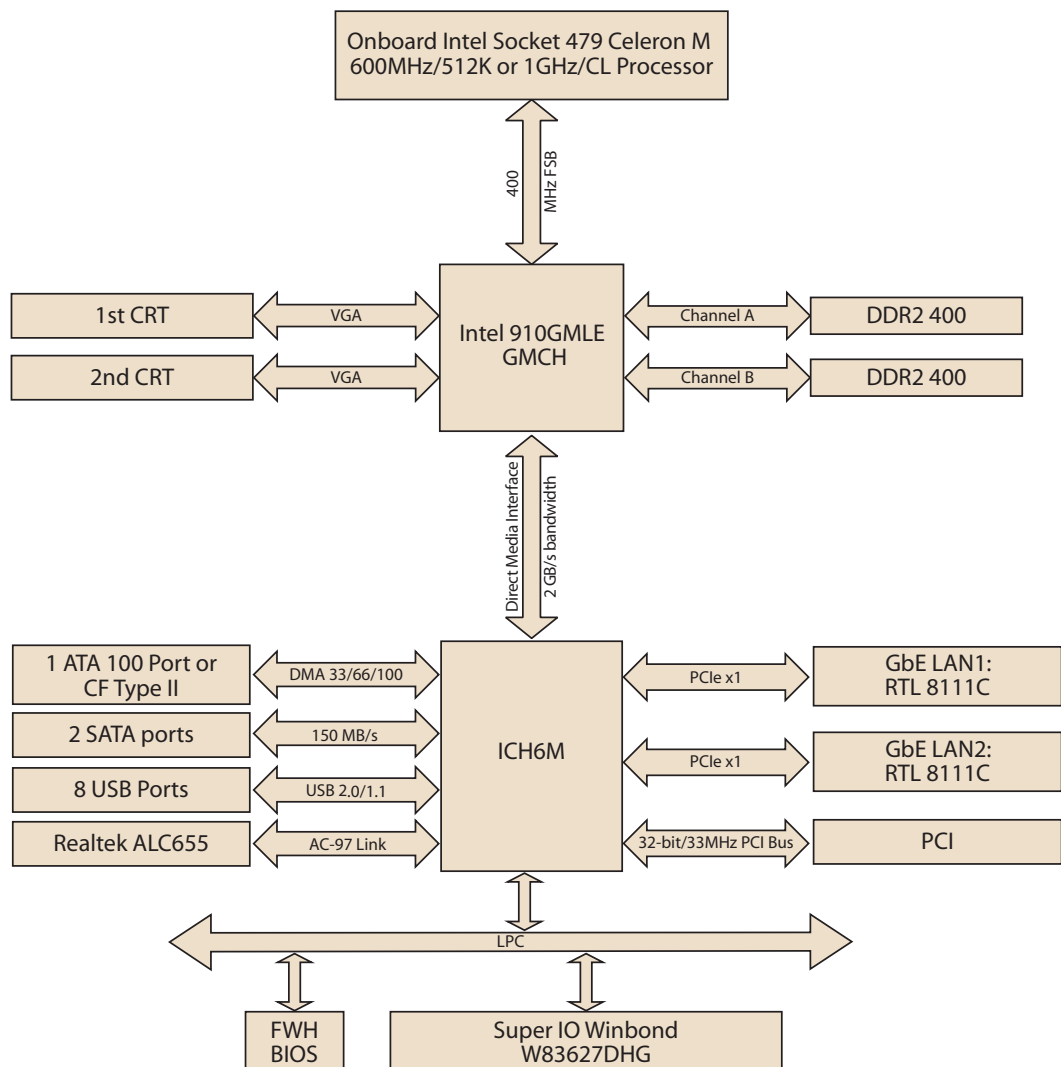

Figure 1.1 Motherboard Layout

1.4 Specifications

	CPU (130/90 nm, μFC-BGA 479)	Celeron M	Celeron M
Processor System	Max. Speed	1 GHz	600 MHz
	Front Side Bus	400 MHz	400 MHz
	L2 Cache	0 MB	512 KB
	Chipset	Intel 910GMLE + ICH6M	
	BIOS	Award 4 Mbit FWH	
Expansion Slot	PCI	32-bit/33 MHz, 1 slot	
	Mini-PCI	-	
	PCIe	-	
Memory	Technology	Dual Channel DDR2 400 SDRAM	
	Max. Capacity	2 GB	
	Socket	240-pin DIMM x 2	
Graphics	Controller	Intel 910GMLE GMCH integrated Graphics Media Accelerator 900	
	VRAM	Intel DVMT 3.0 supports up to 128 MB video memory	
	1st CRT/VGA	Supports max 2048 x 1536 @ 85HZ	
	2nd CRT/VGA	Supports max 2048 x 1536 @ 85HZ	
	DVI	None	
Ethernet	Dual Display	CRT1 + CRT2	
	Interface	10/100/1000Base -T	
	Controller	GbE LAN1: Realtek RTL8111C; GbE LAN2: Realtek RTL8111C	
	Connector	RJ-45 x 2	
SATA	Max Data Transfer Rate	150 MB/s	
	Channel	2	
EIDE	Mode	EIDE (Ultra DMA 100)	
	Channel	1	
SSD	Compact Flash	Supports compact flash type I/II	
Rear I/O	VGA	2	
	Ethernet	2	
	USB	4 (USB 2.0 compliant)	
	Audio	MIC-In, Line-Out, Line-in	
	Serial	2 RS-232	
	PS/2	2 (1 x keyboard and 1 x mouse)	
Internal Connector	USB	4 (USB 2.0 compliant)	
	Serial	*4 RS-232 SKU is for selective models.	
	IDE	1	
	SATA	2	
	Compact Falsh	1	
	IrDA	-	
	DIO	-	
Watchdog Timer	Output	Interrupt, system reset	
	Interval	Programmable 1 ~ 255 sec/ min	

Power Requirement	Maximum	- Intel 910GMLE and Celeron M 600 MHz / 512 KB, FSB 400 MHz, 2 GB DDR2 - +5 V @ 2.23 A, +3.3 V @ 1.02 A, +12 V @ 0.4 A, +5 VSB @ 0.25 A, -12 V @ 0.07 A
	Operating	- Intel 910GMLE and Celeron M 1 GHz / 0 KB, FSB 400 MHz, 2 GB DDR2 - +5 V @ 2.31 A, +3.3 V @ 1.14 A, +12 V @ 0.45 A, +5 VSB @ 0.23 A, -12 V @ 0.6 A
Environment	Temperature	0 ~ 60° C (32 ~ 140° F)
Physical Characteristics	Dimensions	170 mm x 170 mm (6.69" x 6.69")
* Intel 910GMLE only supports FSB 400MHz processor and DDR2 400 SDRAM

1.11 System Memory

1.11.1 DIMM Sockets Location

The motherboard comes with two 240-pin Double Data Rate 2 (DDR2) Dual Inline Memory Modules (DIMM) sockets.

A DDR2 module has the same physical dimensions as a DDR DIMM but has a 240-pin footprint compared to the 240-pin DDR DIMM. DDR2 DIMMs are notched differently to prevent installation on a DDR DIMM socket. The following figure illustrates the location of the sockets:

1.11.2 Memory Configurations

You can install 128 MB, 256 MB, 512 MB, 1GB and 2GB DDR2 SDRAM DIMMs into the SODIMM sockets using the memory configurations in this section.

Note!

- Installing DDR2 DIMM other than the recommended configurations may cause memory sizing error or system boot failure. Use any of the recommended configurations.
- Always install DIMMs with the same CAS latency. For optimum compatibility, it is recommended that you obtain memory modules from the same vendor.
- Due to chipset resource allocation, the system may detect less than 1 GB system memory when you installed one 1 GB DDR2 memory modules.
- This motherboard does not support memory modules made up of 128 MB chips or double-sided x16 memory modules.
- Make sure that the memory frequency matches the CPU FSB (Front Side Bus). Refer to the Memory frequency/CPU FSB synchronization table.

Note! ■ Recommended memory configuration.

Sockets

Mode	DIMM1	DIMM2
Single-channel	(1) Install	-
	(2) -	Install

■ CPU FSB/Memory frequency synchronization.

CPU FSB	DDR 2 DIMM Type	Memory Frequency
400 MHz	DDR2 533	400 MHz
	DDR2 400	400 MHz

1.11.3 Installing a DDR2 DIMM

Caution! Make sure to unplug the power supply before adding or removing DIMMs or other system components. Failure to do so may cause severe damage to both the motherboard and the components.

1. Unlock a DIMM socket by pressing the retaining clips outward
2. Align a DIMM on the socket such that the notch on the DIMM matches the break on the socket.
3. Firmly insert the DIMM into the socket until the retaining clips snap back in place and the DIMM.

Caution! ■ A DDR2 DIMM is keyed with a notch so that it fits in only one direction. DO NOT force a DIMM into a socket to avoid damaging the DIMM.

■ The DDR2 DIMM sockets do not support DDR DIMMs. DO NOT install DDR DIMMs to the DDR2 DIMM socket.

1.11.4 Removing a DDR2 DIMM

1. Simultaneously press the retaining clips outward to unlock the DIMM.
2. Remove the DIMM from the socket.

Caution! Support the DIMM lightly with your fingers when pressing the ejector tabs. The DIMM might get damaged when it flips out with extra force.

1.12 Expansion Slots

In the future, you may need to install expansion cards. The following subsections describe the slots and the expansion cards that they support.

Warning! Make sure to unplug the power cord before adding or removing expansion cards. Failure to do so may cause you physical injury and damage motherboard components.

1.12.1 Installing an Expansion Card

1. Before installing the expansion card, read the documentation that came with it and make the necessary hardware settings for the card.
2. Remove the system unit cover (if your motherboard is already installed in a chassis).
3. Remove the bracket opposite the slot that you intend to use. Keep the screw for later use.
4. Align the card connector with the slot and press firmly until the card is completely seated on the slot.
5. Secure the card to the chassis with the screw you removed earlier.
6. Replace the system cover.

1.12.2 Configuring an Expansion Card

After installing the expansion card, configure it by adjusting the software settings.

1. Turn on the system and change the necessary BIOS settings if any.
2. Assign an IRQ to the card if needed. Refer to the tables on the next page.
3. Install the software drivers for the expansion card.

1.12.3 Standard Interrupt Assignments

Table 1.6: Standard Interrupt Assignments

IRQ	Priority	Standard Function
0	1	System Timer
1	2	Keyboard Controller
2	-	Redirect to IRQ#9
3	11	COM5
5	13	IRQ holder for PCI steering*
6	14	Floppy Disk Controller
8	3	COM2
9	4	COM1
10	5	COM3
11	6	IRQ holder for PCI steering*
12	7	PS/2 Compatible Mouse Port*
13	8	Numeric Data Processor
14	9	Primary IDE Channel
15	10	COM4

*These IRQs are usually available for ISA or PCI device.

1.12.4 PCI Slots

GMB-910 has one PCI slots. The PCI slots support cards such as a LAN card, SCSI card, USB card, and other cards that comply with PCI specifications. The figure shows a LAN card installed on a PCI slot.

1.13 Connectors

1.13.1 Rear Panel Connectors

Table 1.7: Rear Panel Connectors

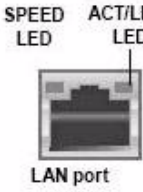

No	Label	Function	Description
1	KBMS1	PS/2 mouse connector	The standard PS/2 mouse DIN connector is for a PS/2 mouse.
2,3	COM1 COM2	Serial port connector x 1	D-sub 9-pin, male
4,5	LAN1_USB12/ LAN2_USB34	LAN (RJ-45) connector	This port allows Gigabit connection to a Local Area Network (LAN) through a network hub. Refer to the table below for the LAN port LED indications. The optional 10/100 Mbps LAN controller allows 10/100 Mbps connection to a LAN through a network hub.
			
6	Audio1	3 ports audio connector	Mic-in, Line-in, Line-out
7,8	VGA1 VGA2	VGA port	D-sub 15-pin, female

Table 1.8: LEDs

ACT / LINK LED		SPEED LED	
Status	Description	Status	Description
OFF	No link	OFF	10 Mbps connection
Green	Linked	ORANGE	100 Mbps connection
Blinking	Data activity	GREEN	1 Gbps connection

1.13.2 System Fan Connector (SYSFAN1)

- Caution!** ■ *Do not forget to connect the fan cables to the fan connectors. Insufficient air flow inside the system may damage the motherboard components, and hardware monitoring errors can occur if you fail to plug this connector.*
- *These are not jumpers! DO NOT place jumper caps on the fan connectors.*

1.13.3 Serial Port Connector 34 (COM34) (optional)

DDCD3_N	□	○	DDSR3_N
RRXD3	○	○	RRTS3_N
TTXD3	○	○	CCTS3_N
DDTR3_N	○	○	RRI3_M
GND	○	○	GND
DDCD4_N	○	○	DDSR4_N
RRXD4	○	○	RRTS4_N
TTXD4	○	○	CCTS4_N
DDTR4_N	○	○	RRI4_N
GND	○	○	GND

1.13.4 Serial Port Connector 56 (COM56) (optional)

DDCD5_N	□	○	DDSR5_N
RRXD5	○	○	RRTS5_N
TTXD5	○	○	CCTS5_N
DDTR5_N	○	○	RRI5_M
GND	○	○	GND
DDCD6_N	○	○	DDSR6_N
RRXD6	○	○	RRTS6_N
TTXD6	○	○	CCTS6_N
DDTR6_N	○	○	RRI6_N
GND	○	○	GND

1.13.5 Front Headphone Connector (FPAUD1)

This connector is for a chassis-mounted front panel audio I/O module that supports either HD Audio or legacy AC'97 (optional) audio standard. Connect one end of the front panel audio I/O module cable to this connector.

Note! For motherboards with the optional HD Audio feature, we recommend that you connect a high-definition front panel audio module to this connector to avail of the motherboard's high definition audio capability.

1.13.6 Front Panel Connector (JFP1/JFP2/JFP3)

There are several external switches to monitor and control the GMB-910.

1.13.6.1 ATX Soft Power Switch (JFP1)

If your computer case is equipped with an ATX power supply, you should connect the power on/off button on your computer case to JFP1 PIN1, 2. This connection enables you to turn your computer on and off.

1.13.6.2 Reset Connector (JFP1)

Many computer cases offer the convenience of a reset button. Connect the wire from the reset button.

JFP1

pin.1	#PWR_SW
pin.2	GND
pin.3	#RST_SW
pin.4	GND

1.13.6.3 External Speaker (JFP2)

JFP2 is a 4-pin connector for an external speaker. If there is no external speaker, the GMB-910 provides an onboard buzzer as an alternative. To enable the buzzer, set pins 5-7 as closed.

1.13.6.4 HDD LED Connector (JFP2)

You can connect an LED to connector JFP2 to indicate when the HDD is active.

1.13.6.5 SM Bus Connector (JFP2 PIN6,8)

This connector is reserved for Advantech's SNMP-1000 HTTP/SNMP Remote System Manager. The SNMP-1000 allows users to monitor the internal voltages, temperature and fans from a remote computer through an Ethernet network.

JFP2 PIN6,8 can be connected to CN19 of SNMP-1000. Please be careful about the pin assignments, pin 6 must be connected to pin 1 and pin 8 to pin 2 on both ends of cable.

JFP2			
pin.1	BUZZER+	pin.2	HDD_LED+
pin.3	NC	pin.4	HDD_LED-
pin.5	MB_BEEP+	pin.6	SM_DAT
pin.7	BUZZER-	pin.8	SM_CLK

1.13.7 Power LED and keyboard lock connector (JFP3 / PWR_LED&KEY LOCK)

(JFP3 / PWR_LED&KEY LOCK) is a 5-pin connector for the power on LED and Key Lock function. The Power LED cable should be connected to pin 1-3. The key lock button cable should be connected to pin 4-5.

There are 3 modes for the power supply connection. The first is “ATX power mode”, system is on/off by a tentative power button. The second is “AT Power Mode”, system is on/off by the switch of the Power supply. The third is another “AT Power Mode” which is using the front panel power switch. The power LED status is indicated as following table:

Table 1.9: ATX power supply LED status (No support for AT power)

Power Mode	LED (ATX Power Mode) (On/Off by tentative button)	LED (AT Power Mode) (On/Off by switching power supply)	LED (AT Power Mode) (On/Off by front panel switch)
PSON1 (On Back plane) Jumper Setting	2-3 pin closed	1-2 pin closed	Connect 1-2 pin cable with switch
System On	On	On	On
System Status	Fast flashes	Fast flashes	Fast flashes
System Off	Slow flashes	Off	Off

JFP3	
pin.1	PWR_LED+
pin.2	NC
pin.3	GND
pin.4	#KB_LOCK
pin.5	GND

1.13.8 USB 2.0 Connector (USB56, USB78)

These connectors are for USB 2.0 ports. Connect the USB/GAME module cable to any of these connectors, then install the module to a slot opening at the back of the system chassis. These USB connectors comply with USB 2.0 specification that supports up to 480 Mbps communication speed.

Caution! Never connect a 1394 cable to the USB connectors. Doing so will damage the motherboard!

Note! The USB module is purchased separately.

1.13.9 ATX Power Connector (EATXPWR1)

This connector is for an ATX Micro-Fit power supply. The plugs from the power supply are designed to fit these connectors in only one orientation. Find the proper orientation and push down firmly until the connectors completely fit.

Important notes on the Motherboard Power Requirements

- Note!** ■ Make sure that your ATX 12 V power supply can provide 6 A on the +12 V lead and at least 1A on the +5-volt standby lead (+5 VSB). The minimum recommended wattage is 180 W for a fully configured system. The system can become unstable and might experience difficulty powering up if the power supply is inadequate.
- You must install a PSU with a higher power rating if you intend to install additional devices.

1.13.10 Serial ATA Connector 1 & 2 (SATA1, SATA2)

- Note!**
- Install the Windows® 2000 Service Pack 4 or the Windows® XP Service Pack1 before using Serial ATA.
 - When using the connectors in Standard IDE mode, connect the primary (boot) hard disk drive to the SATA1 connector.

Chapter 2

BIOS Operation

2.1 BIOS Introduction

Advantech provide full-featured AwardBIOS 6.0 and delivers the superior performance, compatibility and functionality that manufactures of Industry PC and Embedded boards, it's many options and extensions let you customize your products to a wide range of designs and target markets.

The modular, adaptable AwardBIOS 6.0 supports the broadest range of third-party peripherals and all popular chipsets, plus Intel, AMD, nVidia, VIA, and compatible CPUs from 386 through Pentium and AMD Geode, K7 and K8 (including multiple processor platforms), and VIA Eden C3 and C7 CPU.

You can use Advantech's utilities to select and install features to suit your designs for customer's need.

2.2 BIOS Setup

The GMB-910 Series system has build-in AwardBIOS with a CMOS SETUP utility which allows user to configure required settings or to activate certain system features.

The CMOS SETUP saves the configuration in the CMOS RAM of the motherboard. When the power is turned off, the battery on the board supplies the necessary power to the CMOS RAM.

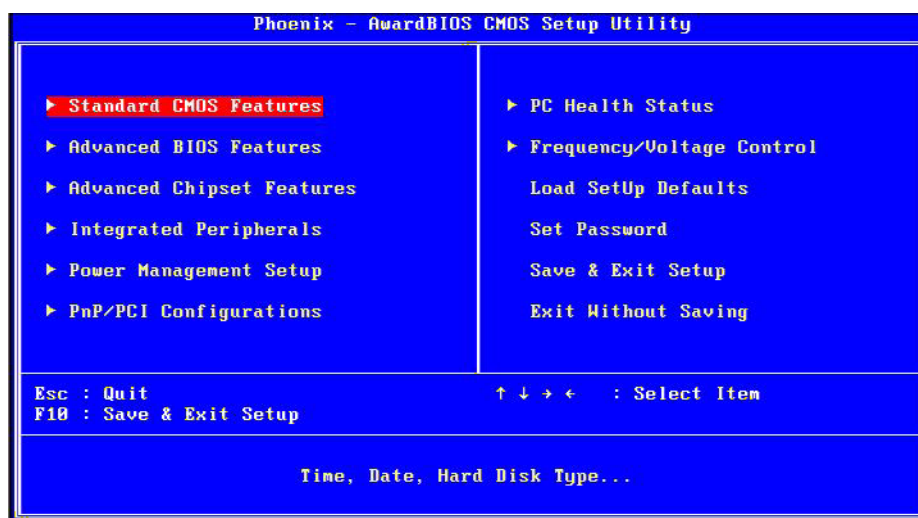

When the power is turned on, press the button during the BIOS POST (Power-On Self Test) will take you to the CMOS SETUP screen.

CONTROL KEYS

< ↑ >< ↓ >< ← >< → >	Move to select item
<Enter>	Select Item
<Esc>	Main Menu - Quit and not save changes into CMOS Sub Menu - Exit current page and return to Main Menu
<Page Up/+>	Increase the numeric value or make changes
<Page Down/->	Decrease the numeric value or make changes
<F1>	General help, for Setup Sub Menu
<F2>	Item Help
<F5>	Load Previous Values
<F7>	Load Optimized Default
<F10>	Save all CMOS changes

2.2.1 Main Menu

Press to enter AwardBIOS CMOS Setup Utility, the Main Menu will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

- **Standard CMOS Features**
This setup page includes all the items in standard compatible BIOS.
- **Advanced BIOS Features**
This setup page includes all the items of Award BIOS enhanced features.
- **Advanced Chipset Features**
This setup page includes all the items of Chipset configuration features.
- **Integrated Peripherals**
This setup page includes all onboard peripheral devices.
- **Power Management Setup**
This setup page includes all the items of Power Management features.
- **PnP/PCI Configurations**
This setup page includes PnP OS and PCI device configuration.
- **PC Health Status**
This setup page includes the system auto detect CPU and system temperature, voltage, fan speed.
- **Frequency/Voltage Control**
This setup page includes CPU host clock control, frequency ratio and voltage.
- **Load Optimized Defaults**
This setup page includes Load system optimized value, and the system would be in best performance configuration.
- **Set Password**
Establish, change or disable password.
- **Save & Exit Setup**
Save CMOS value settings to CMOS and exit BIOS setup.
- **Exit Without Saving**
Abandon all CMOS value changes and exit BIOS setup.

2.2.2 Standard CMOS Features

■ Date

The date format is <week>, <month>, <day>, <year>.

Week	From Sun to Sat, determined and display by BIOS only
Month	From Jan to Dec.
Day	From 1 to 31
Year	From 1999 through 2098

■ Time

The times format in <hour> <minute> <second>, base on the 24-hour time

■ IDE Channel 0/1, Master/Slave

IDE HDD Auto-Detection Press "Enter" for automatic device detection.

■ Halt on

The item determines whether the computer will stop if an error is detected during power up.

No Errors	The system boot will not stop for any error
All Errors	Whenever the BIOS detects a non-fatal error the system will be stopped.
All, But Keyboard	The system boot will not stop for a keyboard error; it will stop for all other errors. (Default value)

■ Base Memory

The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system.

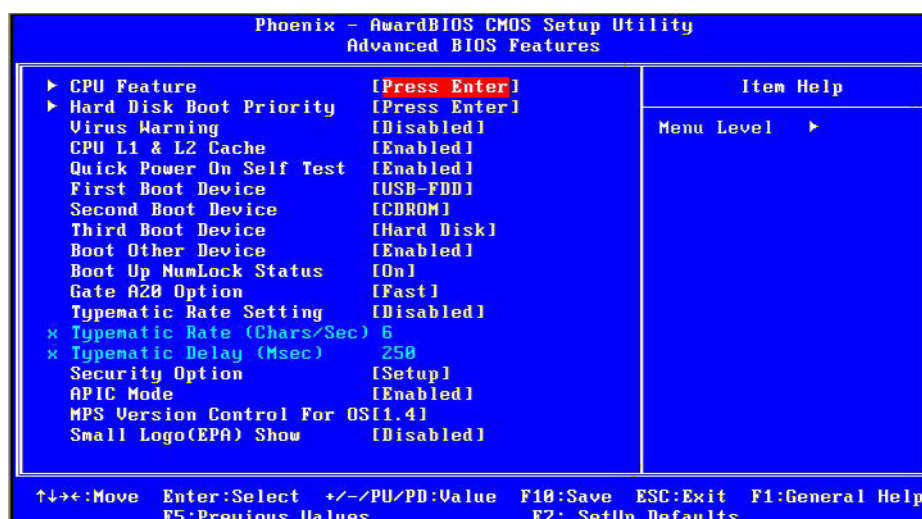

■ Extended Memory

The POST of the BIOS will determine the amount of extended memory (above 1MB in CPU's memory address map) installed in the system.

■ Total Memory

This item displays the total system memory size.

2.2.3 Advanced BIOS Features

■ CPU Feature

This item allows user to adjust CPU features, CPU ratio, VID and Thermal and special feature like XD flag.

■ Hard Disk Boot Priority

This item allows user to select boot sequence for system device HDD, SCSI, RAID, and USB-HDD.

■ Virus Warning [Disabled]

Enables or disables the virus warning.

■ CPU L1 & L2 Cache [Enabled]

This item allows user to enable CPU L1 and L2 cache.

■ CPU L3 Cache [Enabled]

This item allows user to enable CPU L3 cache.

■ Quick Power On Self Test [Enabled]

This field speeds up the Power-On Self Test (POST) routine by skipping retesting a second, third and forth time. Setup setting default is enabled.

■ First / Second / Third / Other Boot Drive

Hard Disk	Select boot device priority by Hard Disk.
CDROM	Select boot device priority by CDROM.
USB-FDD	Select boot device priority by USB-FDD.
USB-ZIP	Select boot device priority by USB-ZIP.
USB-CDROM	Select boot device priority by USB-CDROM.
LAN	Select boot device priority by LAN.
Disabled	Disable this boot function.

■ Boot Up NumLock Status [Enabled]

This item enables users to activate the Number Lock function upon system boot

■ Gate A20 Option [Fast]

This item enables users to switch A20 control by port 92 or not.

■ Typematic Rate Setting

This item enables users to set the two typematic controls items.

This field controls the speed at

- Typematic Rate (Chars/Sec)

This item controls the speed at system registers repeated keystrokes.

Eight settings are 6, 8, 10, 12, 15, 20, 24 and 30.

– Typematic Delay (Msec)

This item sets the time interval for displaying the first and second characters.

Four delay rate options are 250, 500, 750 and 1000.

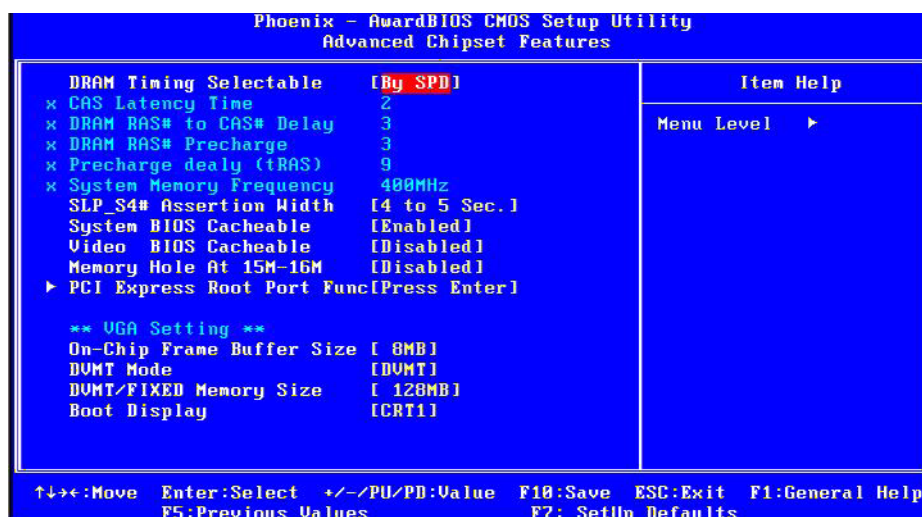

■ **Security Option [Setup]**

System	System can not boot and can not access to Setup page if the correct password is not entered at the prompt.
Setup	System will boot, but access to Setup if the correct password is not entered at the prompt. (Default value)

■ **APIC Mode [Enabled]**

This item allows user to enabled of disabled “Advanced Programmable Interrupt Controller”. APIC is implemented in the motherboard and must be supported by the operating system, and it extends the number of IRQ's available.

2.2.4 Advanced Chipset Features

Note!  This “Advanced Chipset Features” option controls the configuration of the board’s chipset, this page is developed by Chipset independent, for control chipset register setting and fine tune system performance. It is strongly recommended only technical users make changes to the default settings.

- **DRAM Timing Selectable [By SPD]**
This item enables users to set the optimal timings for items 2 through 5, system default setting of “By SPD” to follow the SPD information and ensure the system running in stable and optimal performance.
- **CAS Latency Time [Auto]**
This item enables users to set the timing delay in clock cycles before SDRAM start a read command after receiving it.
- **DRAM RAS# to CAS# Delay [Auto]**
This item enables users to set the timing of the transition from RAS (row address strobe) to CAS (column address strobe) as both rows and column are separately addressed shortly after DRAM is refreshed.
- **DRAM RAS# Precharge [Auto]**
This item enables users to set the DRAM RAS# precharge timing, system default is setting to “Auto” to reference the data from SPD ROM.
- **Precharge delay (tRAS) [Auto]**
This item allows user to adjust memory precharge time.
- **System Memory Frequency [Auto]**
This item allows user to adjust memory frequency to improvement performance.
SLP_S4# Assertion Width {1 to 5 sec}
- **System BIOS Cacheable [Enabled]**
This item allows the system BIOS to be cached to allow faster execution and better performance.
- **Video BIOS Cacheable [Disabled]**
This item allows the video BIOS to be cached to allow faster execution and better performance.
- **Memory Hole At 15 M-16 M [Disabled]**

This item reserves 15 MB-16 MB memory address space to ISA expansion cards that specifically require the setting. Memory from 15 MB-16 MB will be unavailable to the system because of the expansion cards can only access memory at this area.

■ **PCI Express Root Port Function [Press Enter]**

This item allows the user to adjust PCIE port on,off or auto.

VGA setting

■ **PEG/Onchip VGA Control**

Use this field to select PEG or Onchip VGA. The default is AUTO.

■ **On-Chip Frame Buffer Size [8 MB]**

This item allows the user to adjust on-chip graphics of memory buffer.

■ **DVMT Mode [DVMT]**

This item allows the user to adjust Intel's Dynamic Video Memory Technology (DVMT).Bios provide three option to choose (DVMT, FIXED and Both).

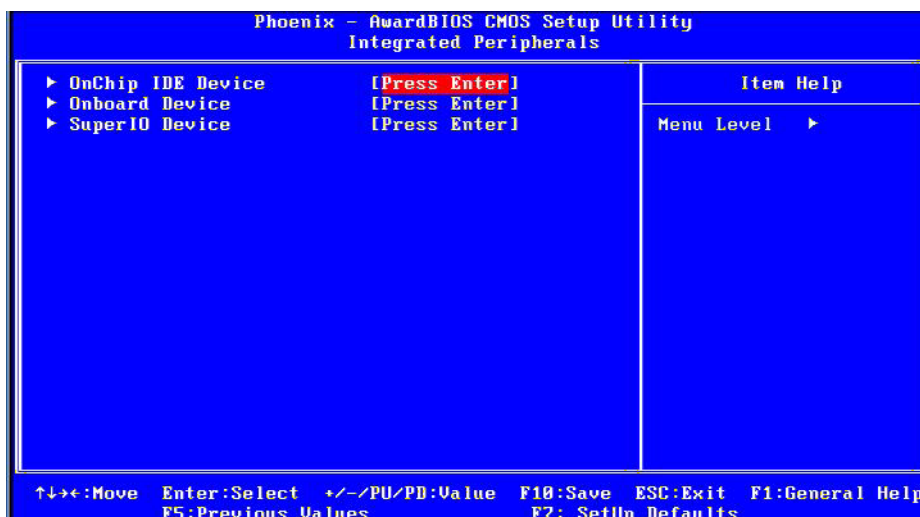

■ **DVMT/FIXED Memory Size [128 MB]**

This item allows the user to adjust DVMT/FIXED graphics memory size.

■ **Boot Display [CRT1]**

This item allows the user to decide that display mode.

2.2.5 Integrated Peripherals

Note! This “Integrated Peripherals” option controls the configuration of the board’s chipset, includes IDE, ATA, SATA, USB, AC97, MC97 and Super IO and Sensor devices, this page is developed by Chipset independent.

■ OnChip IDE Device

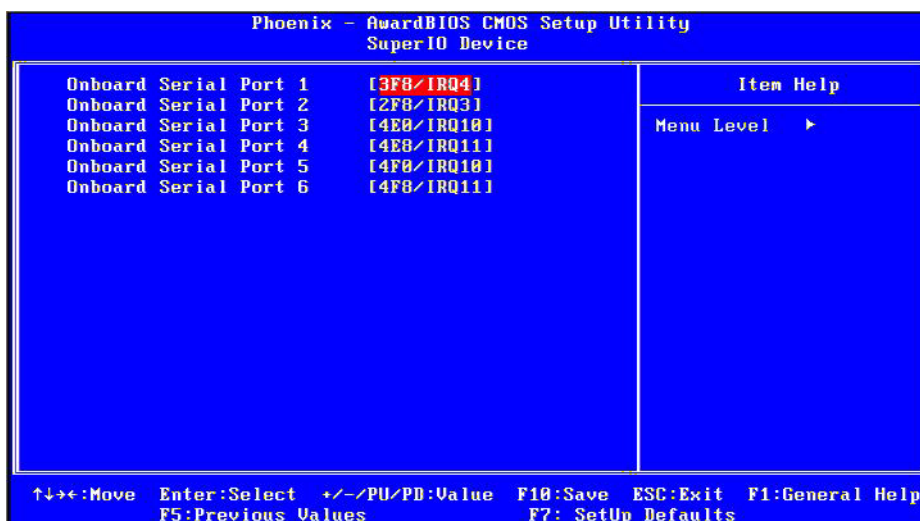

This item enables users to set the OnChip IDE device status, includes enable IDE devices and setting PIO and DMA access mode, and some of new chipset also support for SATA device (Serial-ATA)

■ Onboard Device

This item enables users to set the Onboard device status, includes enable USB, AC97, MC97 and LAN devices.

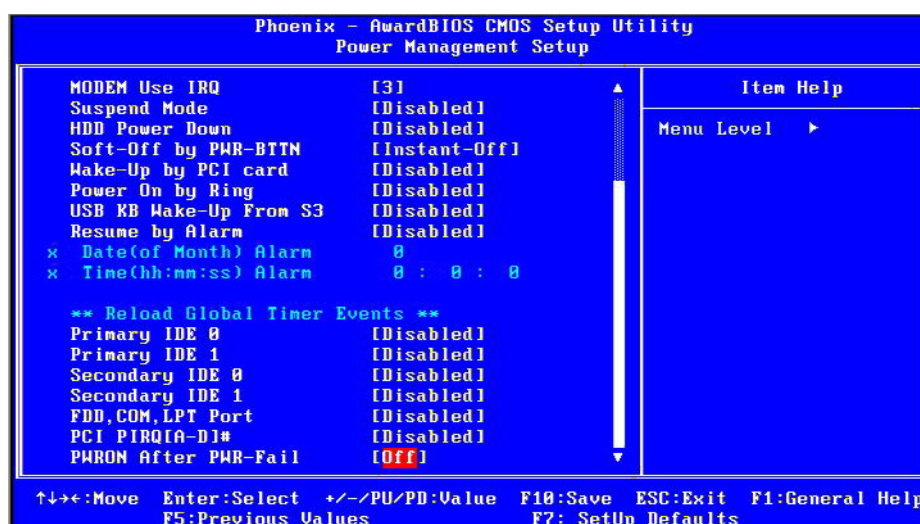

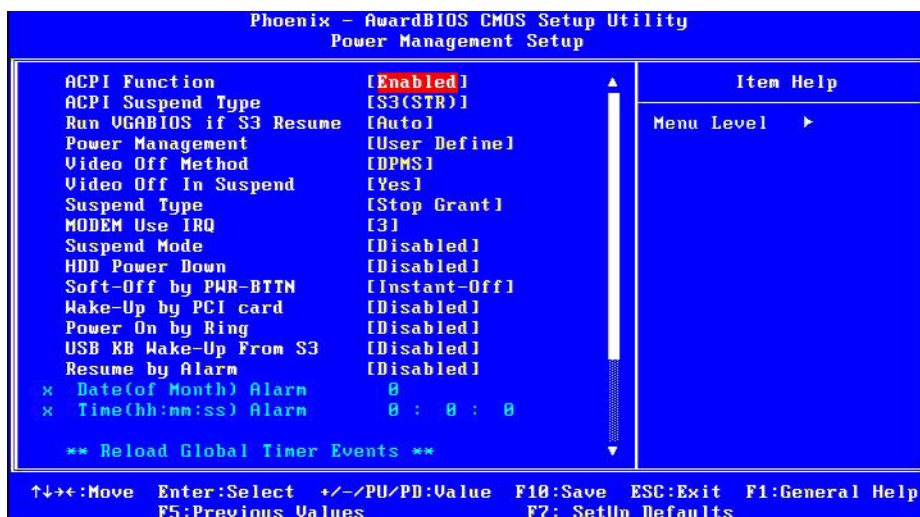

■ Super IO Device

This item enables users to set the Super IO device status, includes enable Floppy, COM, LPT, IR and control GPIO and Power fail status.

-
- **Onboard Serial port 1 [3F8 / IRQ4]**
This item allows user to adjust serial port 1 of address and IRQ.
 - **Onboard Serial port2 [2F8/IRQ3]**
This item allows user to adjust serial port 2 of address and IRQ.
 - **Onboard Serial Port 3 [4E0/IRQ10]**
This item allows user to adjust serial port 3 of address.
 - **Onboard Serial Port 4 [4E8/IRQ11]**
This item allows user to adjust serial port 4 of address.
 - **Onboard Serial Port 5 [4F0/IRQ10]**
This item allows user to adjust serial port 5 of address.
 - **Onboard Serial Port 6 [4F8/IRQ11]**
This item allows user to adjust serial port 6 of address.

2.2.6 Power Management Setup

Note! This “Power management Setup” option configure system to most effectively saving energy while operating in a manner consistent with your computer use style.

■ ACPI Function [Enabled]

This item defines the ACPI (Advanced Configuration and Power Management) feature that makes hardware status information available to the operating system, and communicate PC and system devices for improving the power management.

■ ACPI Suspend Type [S1 (POS)]

This item allows user to select sleep state when suspend.

- S1(POS) The suspend mode is equivalent to a software power down;
- S3(STR) The system shuts down with the exception of a refresh current to the system memory.

■ Run VGA BIOS if S3 Resume [Auto]

This item allows system to reinitialize VGA BIOS after system resume from ACPI S3 mode.

■ **Power Management [User Define]**

This item allows user to select system power saving mode.

Min Saving	Minimum power management. Suspend Mode=1 hr.
Max Saving	Maximum power management. Suspend Mode=1 min.
User Define	Allows user to set each mode individually. Suspend Mode= Disabled or 1 min ~1 hr.

■ **Video Off Method [DPMS]**

This item allows user to determine the manner in which the monitor is blanked.

V/H SYNC+Blank	This option will cause system to turn off vertical and horizontal synchronization ports and write blanks to the video buffer.
Blank Screen	This option only writes blanks to the video buffer.
DPMS	Initial display power management signaling.

■ **Video Off In Suspend [Yes]**

This item allows user to turn off Video during system enter suspend mode.

■ **Suspend Type [Stop Grant]**

This item allows user to determine the suspend type.

■ **Modem use IRQ [3]**

This item allows user to determine the IRQ which the MODEM can use.

■ **Suspend Mode [Disabled]**

This item allows user to determine the time of system inactivity, all devices except the CPU will be shut off.

■ **HDD Power Down Mode [Disabled]**

This item allows user to determine the time of system inactivity, the hard disk drive will be powered down.

■ **Soft-Off by PWR-BTTN [Instant-Off]**

This item allows user to define function of power button.

Instant-Off	Press power button then Power off instantly.
Delay 4 Sec	Press power button 4 sec. to Power off.

■ **Wake up by PCI card**

This item allows user to Wake up the system by PCI card. The choices are "Enabled" and "Disabled".

■ **Power on by ring [Enabled]**

This item allows you to wake up the system via COM port from the remote host. The choices: "Enabled", "Disabled".

■ **USB KB Wake_Up From S3 [Disabled]**

This item allows user to set USB keyboard wake up system from S3 Enable or Disable.

■ **Resume by Alarm [Disabled]**

The choices are "Enabled" and "Disabled". Fields that follow below indicate date of current month and time of alarm settings, if enabled.

■ **Primary IDE 0 (1) and Secondary IDE 0 (1) [Disabled]**

When Enabled, the system will resume from suspend mode if Primary IDE 0 (1) or Secondary IDE 0 (1) becomes active. The choices are "Enabled" and "Disabled".

■ **FDD, COM, LPT PORT [Disabled]**

When Enabled, the system will resume from suspend mode if the FDD, interface, COM port, or LPT port is active. The choices are "Enabled" and "Disabled".

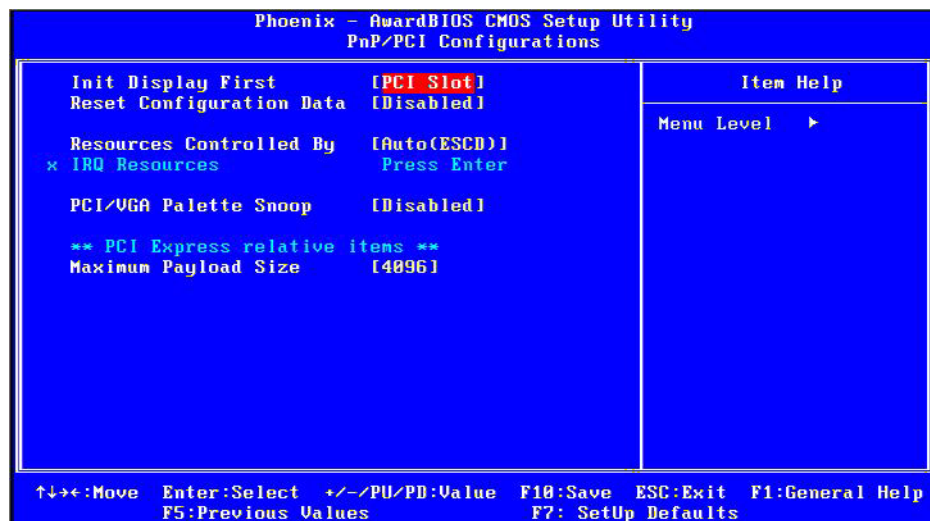

- **PCI PIRQ [A-D]# [Disabled]**

When Enabled, the system resumes from suspend mode if an interrupt occurs. The choices are “Enabled” and “Disabled”.

- **Power on after power fail**

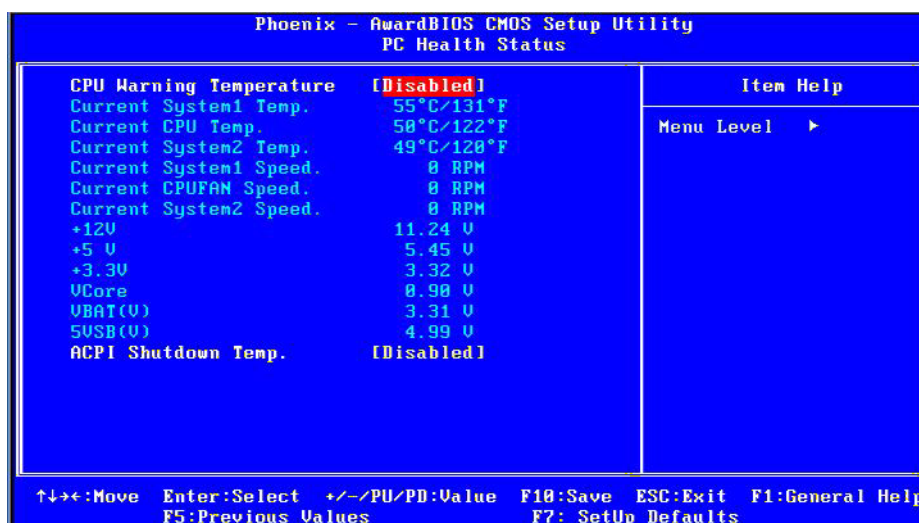

Use this to set up the system after power failure. The “Off” setting keeps the system powered off after power failure. The “On” setting boots up the system after failure.

2.2.7 PnP/PCI Configurations

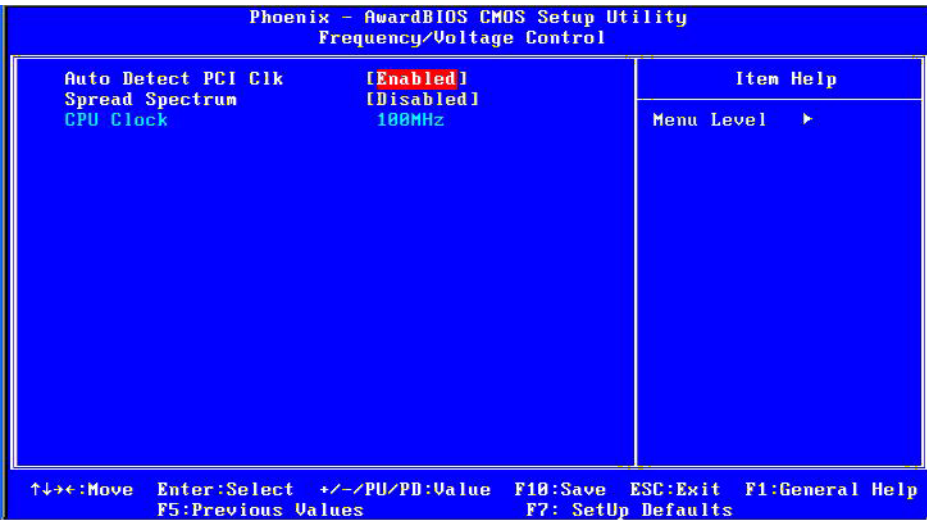

- **Init Display first [PCI slot]**
Choose the first display interface to initiate while booting. The choice is "PCI Slot" or "Onboard."
- **Reset Configuration Data [Disabled]**
The default is Disabled. Select Enabled to reset Extended System Configuration Data (ESCD) if you have installed a new add-on card, and system configuration is in such a state that the OS cannot boot.
- **Resources Controlled By [Auto(ESCD)]**
The commands here are "Auto(ESCD)" or "Manual". Choosing "Manual" requires you to choose resources from the following sub-menu. "Auto(ESCD)" automatically configures all of the boot and Plug and Play devices, but you must be using Windows 95 or above.
- **PCI / VGA Palette Snoop [Disabled]**
This is set to "Disabled" by default.
- **Maximum Payload Size [4096]**
This allows you to set the maximum TLP payload size for PCI Express devices. The options are [128 bytes], [256 bytes], [512 bytes], [1024 bytes], [2048 bytes], and [4096 bytes].

2.2.8 PC Health Status

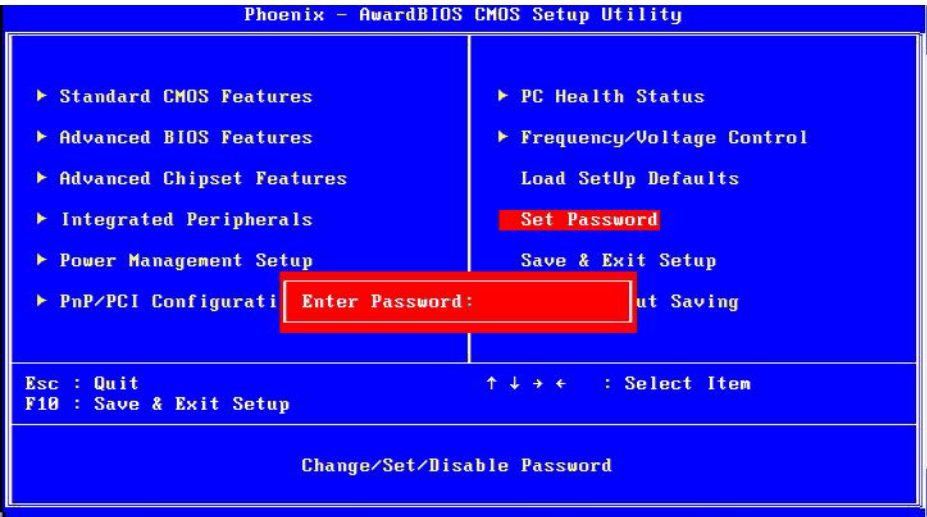

- **CPU Warning Temperature**
This item will prevent the CPU from overheating. The choices are “Disabled”, “60C/140F”, “63C/145F”, “66C/151F”, “70C/158F”.
- **Current System Temperature**
This shows you the current temperature of system.
- **Current CPU Temperature**
This shows the current CPU temperature.
- **VCORE and Other Voltages**
This shows the voltage of VCore, +1.5 V, +3.3 V, +5 V, VBAT (V), and 5 VSB (V).
- **ACPI Shutdown Temperature**
The system will shut down automatically when the CPU temperature is over the selected setting. This function can prevent CPU damage caused by overheating.

2.2.9 Frequency/voltage Control

- **Auto Detect PCI Clk [Enabled]**
When enabled, the BIOS will monitor PCI slots and turn off clock signals to all unoccupied and inactive slots.
When disabled, the BIOS will not monitor PCI slots. All clock signals will remain active even to unoccupied or inactive slots.
- **Spread Spectrum [Disabled]**
This item enables users to set the spread spectrum modulation.
- **CPU Clock**
It shows CPU Clock frequency

2.2.10 Set Password

Note!  To enable this feature, you should first go to the Advanced BIOS Features menu, choose the Security Option, and select either Setup or System, depending on which aspect you want password protected. Setup requires a password only to enter Setup. System requires the password either to enter Setup or to boot the system. A password may be at most 8 characters long.

To Establish Password

1. Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.
2. When you see "Enter Password", enter the desired password and press <Enter>.
3. At the "Confirm Password" prompt, retype the desired password, then press <Enter>.
4. Select Save to CMOS and EXIT, type <Y>, then <Enter>.

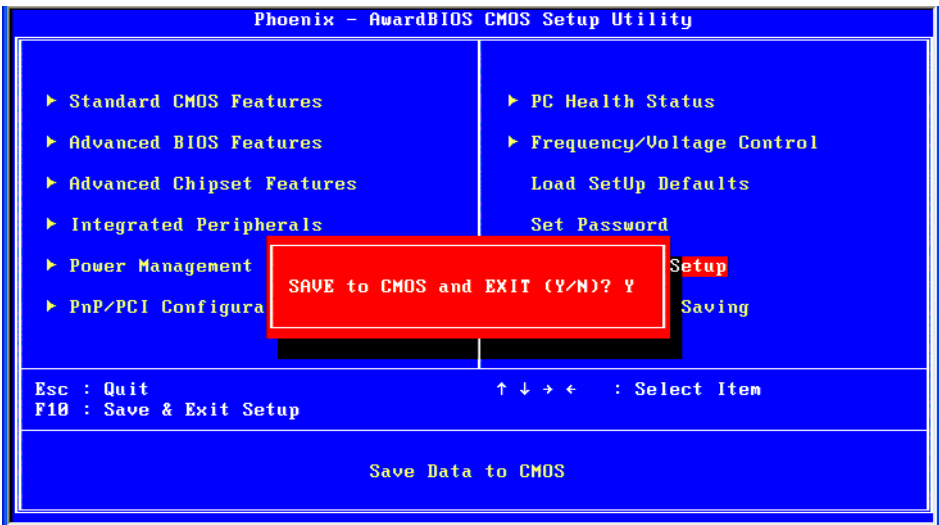

To Change Password

1. Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.
2. When you see "Enter Password", enter the existing password and press <Enter>.
3. You will see "Confirm Password". Type it again, and press <Enter>.
4. Select Set Password again, and at the "Enter Password" prompt, enter the new password and press <Enter>.
5. At the "Confirm Password" prompt, retype the new password, and press <Enter>.
6. Select Save to CMOS and EXIT, type <Y>, then <Enter>.

To Disable Password

1. Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.
2. When you see "Enter Password", enter the existing password and press <Enter>.
3. You will see "Confirm Password". Type it again, and press <Enter>.
4. Select Set Password again, and at the "Enter Password" prompt, please don't enter anything; just press <Enter>.
5. At the "Confirm Password" prompt, again, don't type in anything; just press <Enter>.
6. Select Save to CMOS and EXIT, type <Y>, then <Enter>.

2.2.11 Save & Exit Setup

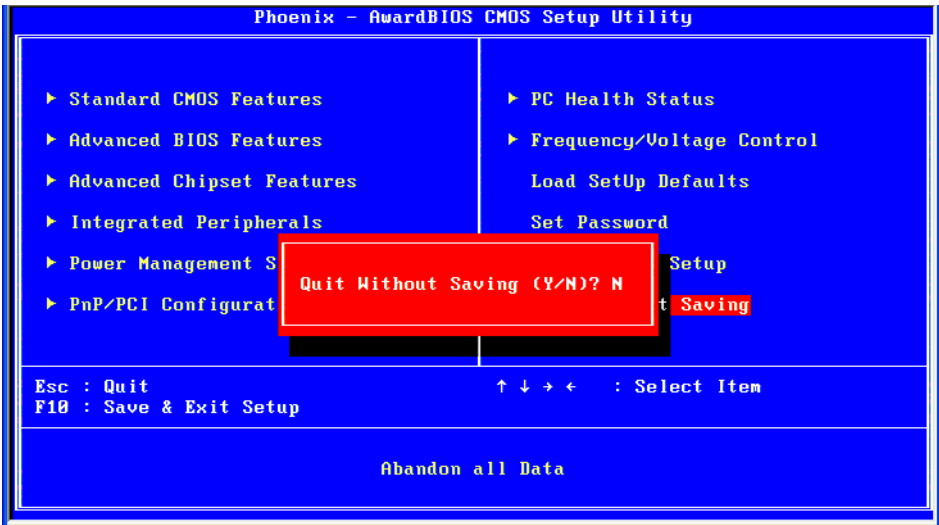

Note! Type "Y" will quit the BIOS Setup Utility and save user setup value to CMOS.

Type "N" will return to BIOS Setup Utility.

2.2.12 Quit Without Saving

Note! Type "Y" will quit the BIOS Setup Utility without saving to CMOS.

Type "N" will return to BIOS Setup Utility.

Chapter 3

Chipset Software
Install Utility

3.1 Before you Begin

To facilitate the installation of the enhanced display device drivers and utility software, you should read the instructions in this chapter carefully before you attempt installation. The device drivers for the GMB-910 board are located on the software installation CD. The auto-run function of the driver CD will guide and link you to the utilities and device drivers under a Windows system. The Intel® Chipset Software Installation Utility is not required on any systems running Windows NT 4.0. Updates are provided via Service Packs from Microsoft*.

Note! *The files on the software installation CD are compressed. Do not attempt to install the drivers by copying the files manually. You must use the supplied SETUP program to install the drivers*

Before you begin, it is important to note that most display drivers need to have the relevant software application already installed in the system prior to installing the enhanced display drivers. In addition, many of the installation procedures assume that you are familiar with both the relevant software applications and operating system commands. Review the relevant operating system commands and the pertinent sections of your application software's user's manual before performing the installation.

3.2 Introduction

The Intel® Chipset Software Installation utility installs to the target system the Windows INF files that outline to the operating system how the chipset components will be configured. This is needed for the proper functioning of the following features:

- Core PCI and ISA PnP services
- IDE Ultra ATA 100/66/33 and Serial ATA interface support
- USB 1.1/2.0 support
- Identification of Intel® chipset components in the Device Manager
- Integrates superior video features. These include filtered sealing of 720 pixel DVD content, and MPEG-2 motion compensation for software DVD

Note! *This utility is used for the following versions of Windows system, and it has to be installed before installing all the other drivers:*

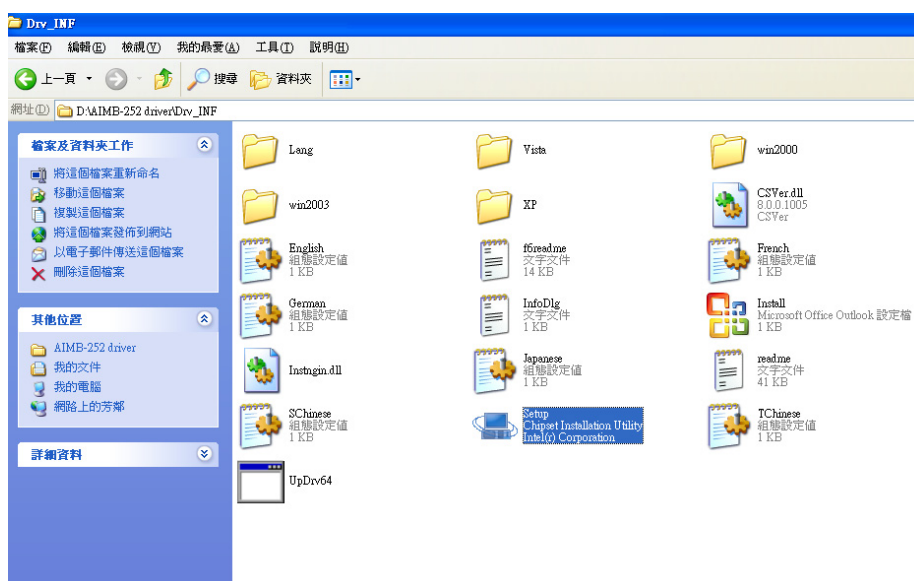

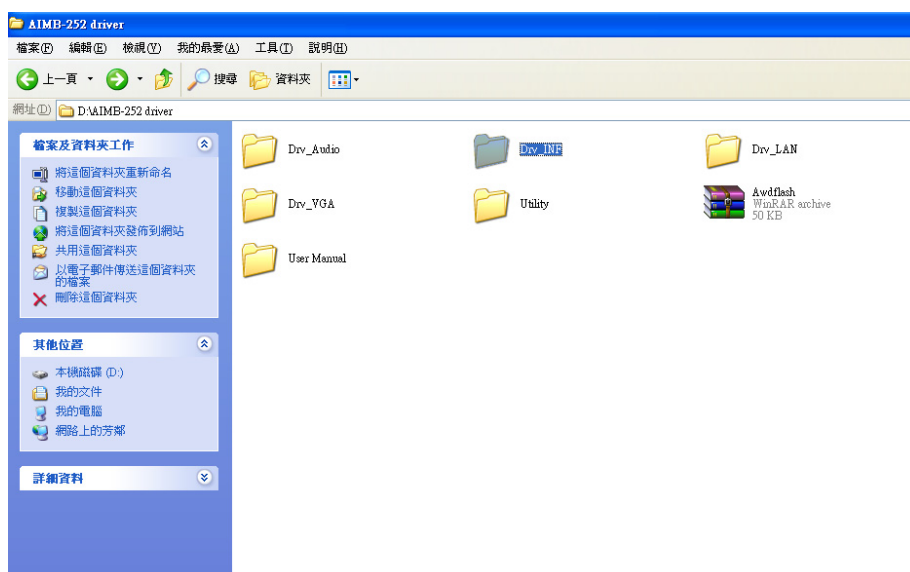

Windows 2000

Windows NT

Windows XP

3.3 Windows XP Driver Setup

Insert the driver CD into your system's CD-ROM drive. You can see the driver folders items. Move the mouse cursor over the folder "INF". In INF folder, you can click "setup.exe" to complete the implement of the driver.

Chapter 4

VGA Setup

4.1 Introduction

The Intel 915GME/910GMLE integrated graphics controller provides an analog display port. You need to install the VGA driver to enable the function.

Intel Graphics Media Accelerator 900: Incorporating the latest Microsoft* DirectX*9 support capabilities, it allows software developers to create lifelike environments and characters. Dual independent display, enhanced display modes for widescreen flat panels, and optimized 3D support deliver an intense and realistic visual experience without requiring a separate graphics card. @ 75 Hz refresh rate).

- LVDS Interface:LVDS1: single channel 18-bit/dual channel 36-bit, LVDS2: single channel 24-bit/dual channel 48-bit. LVDS2 is only available in GMB-910G2-M0A1E sku,(detail please see 4.3 Dual display supporting table)
supporting up to WUXGA(1600X1200) panel resolution

4.2 Windows XP Driver Setup

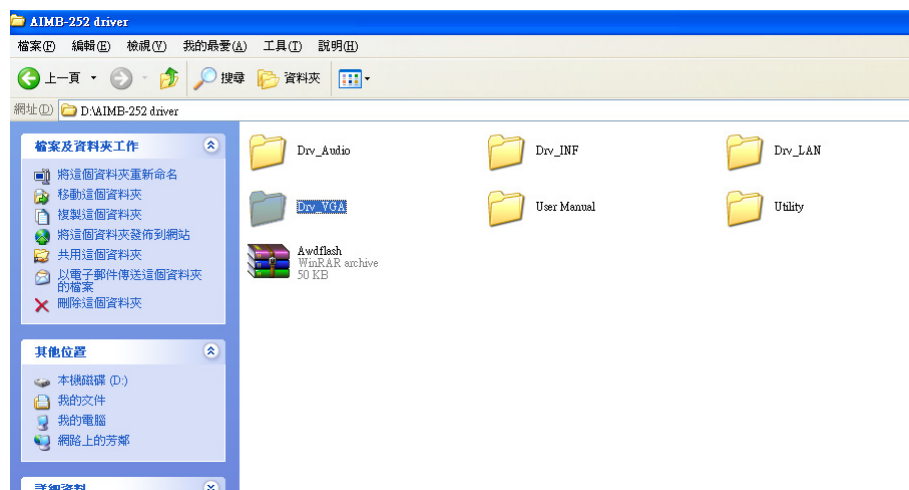

Note! Before installing this driver, make sure the CSI utility has been installed in your system. See Chapter 3 for information on installing the CSI utility.

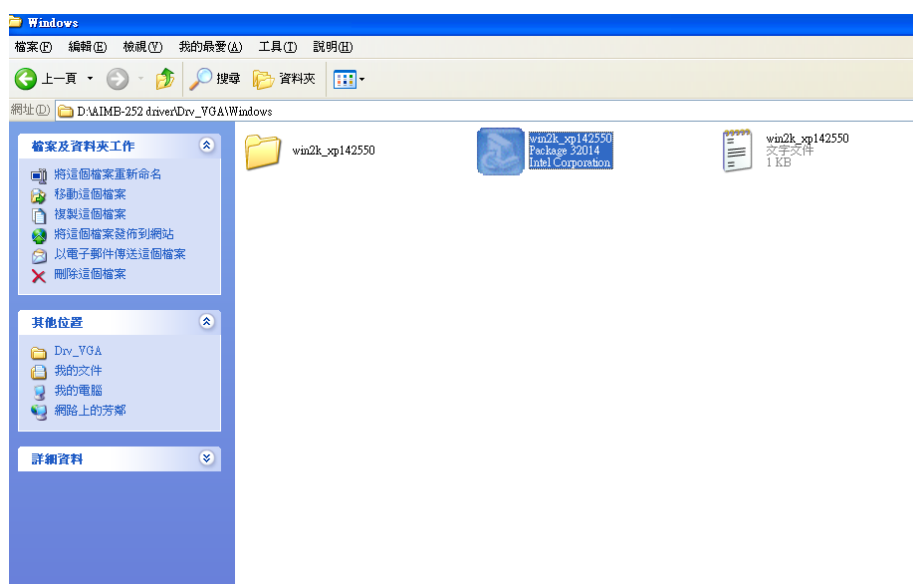

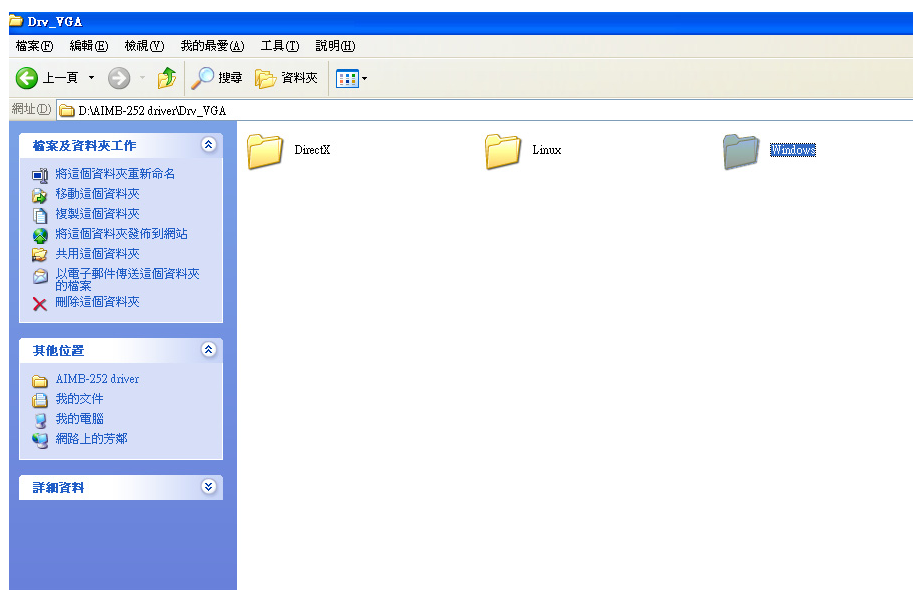

Insert the driver CD into your system's CD-ROM drive. In a few seconds, the software installation main menu appears, as shown in the following figure.

The following installation procedure is for Windows XP. For other operating systems, please do a manual installation.

Move the mouse cursor over the folder "Drv_VGA". In Drv_VGA folder, you can click Installshield Wizard under Windows\win2k_xp142550 to automatic complete the implement of the driver.

Chapter 5

LAN Configuration

5.1 Introduction

The GMB-910 features dual Gigabit Ethernet network interface. With the Realtek RTL8111C GbE controller designed-in, GMB-910 implements the PCI Express host interface (PCI-E X1) in LAN connection with the maximum throughput of 2Gbps for heavy-duty industrial network application.

5.2 Features

Integrated 10/100/1000 BASE-T transceiver

1. 10/100/1000 BASE-T triple-speed MAC
2. High-speed RISC core with 24-KB cache
3. On-chip voltage regulation
4. Supporting Wake-on-LAN (WOL) function
5. PCI Express X1 host interface

5.3 Installation

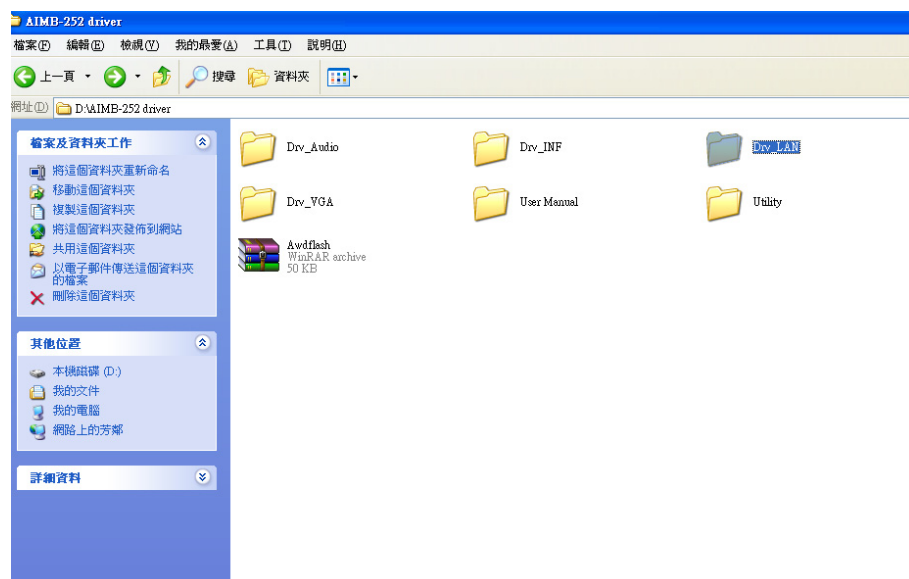

Note! Before installing the LAN drivers, make sure the CSI utility has been installed on your system. See Chapter 3 for information on installing the CSI utility.

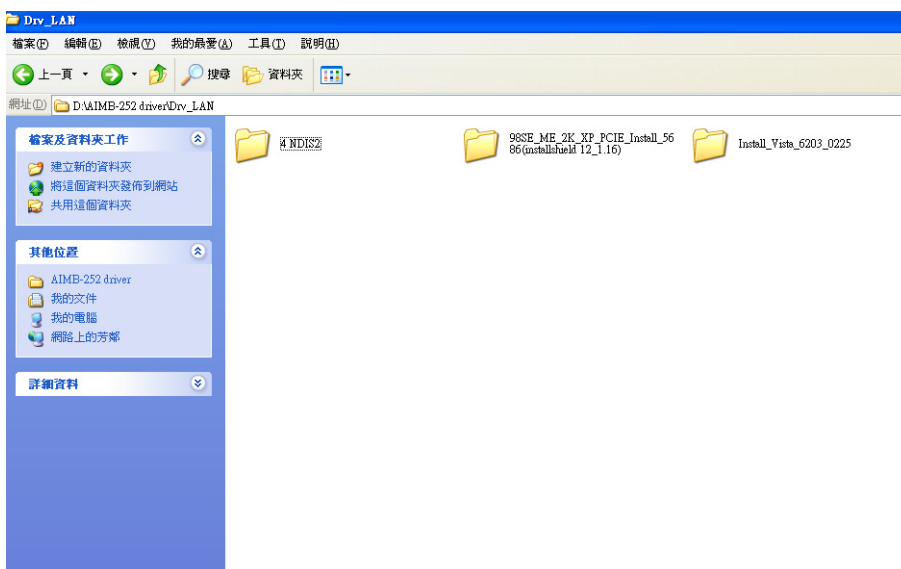

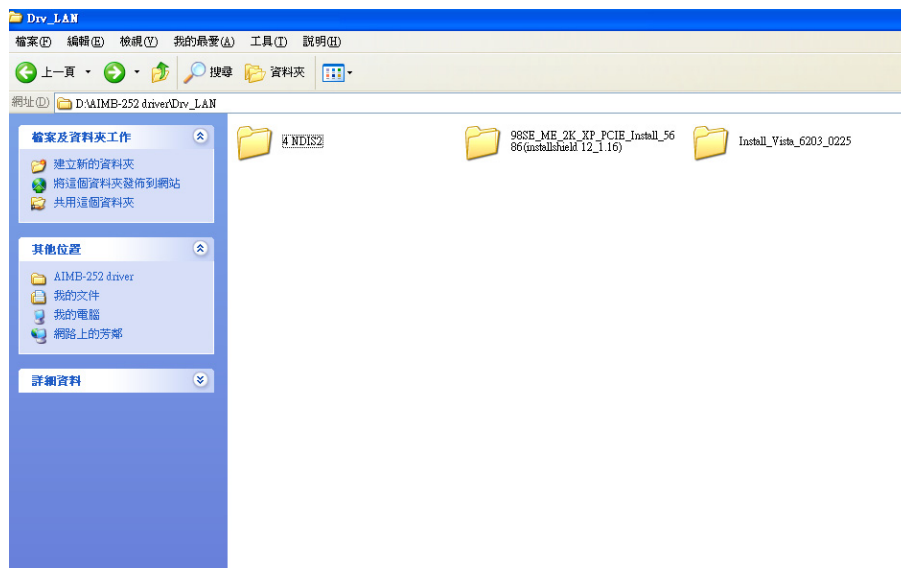

The GMB-910's Realtek RTL8111C Gigabit integrated controller supports all major network operating systems. However, the installation procedure varies with different operating systems. In the following sections, refer to the one that provides driver setup procedure for the operating system you are using.

5.4 Win XP Driver Setup (Realtek RTL8111C)

Insert the driver CD into your system's CD-ROM drive. Select the Drv_LAN folder then click the proper Lan driver for the OS.

Based on different OS, choose proper LAN driver to install.

Appendix **A**

Programming the Watchdog

A.1 Programming the Watchdog Timer

The GMB-910's watchdog timer can be used to monitor system software operation and take corrective action if the software fails to function after the programmed period. This section describes the operation of the watchdog timer and how to program it.

A.1.1 Watchdog timer overview

The watchdog timer is built into the super I/O controller W83627DHG-A. It provides the following functions for user programming:

- Can be enabled and disabled by user's program.
- Timer can be set from 1 to 255 seconds or 1 to 255 minutes.
- Generates an interrupt or resets signal if the software fails to reset the timer after time-out.

A.1.2 Programming the Watchdog Timer

The I/O port address of the watchdog timer is 2E(hex) and 2F(hex).

2E (hex) is the address port. 2F(hex) is the data port.

You must first assign the address of register by writing address value into address port 2E(hex), then write/read data to/from the assigned register through data port 2F(hex).

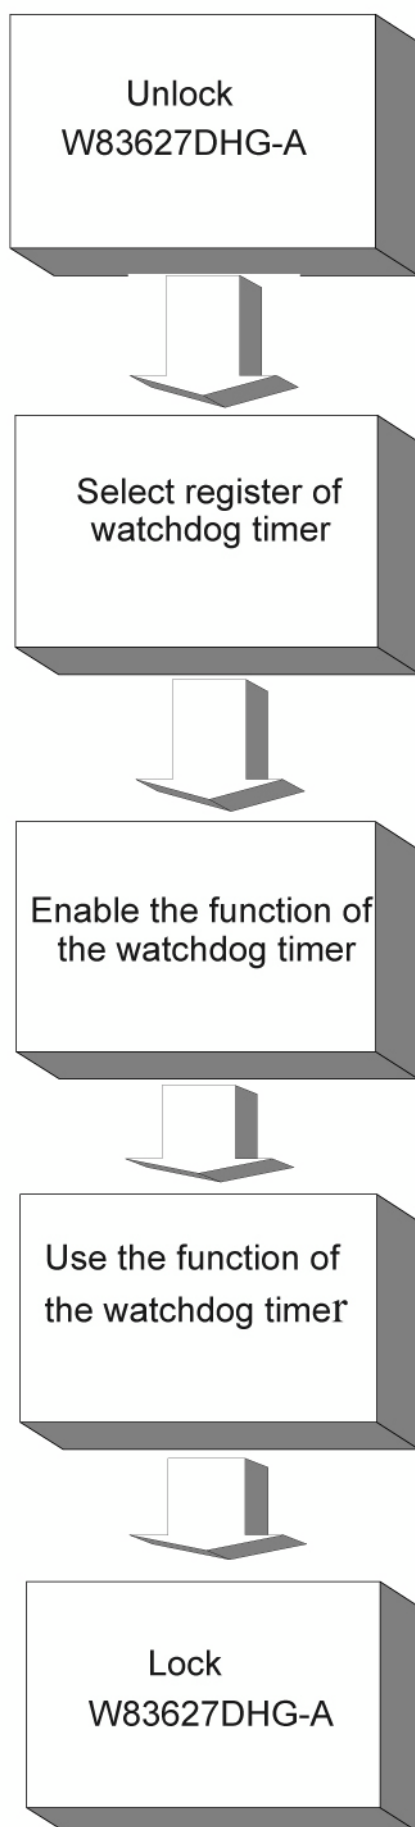

Table A.1: Watchdog Timer Registers

Address of register (2E) Attribute		
Read/Write	Value (2F) and description	
87 (hex)	-	Write this address to I/O address port 2E (hex) twice to unlock the W83627HF
07 (hex)	write	Write 08 (hex) to select register of watchdog timer.
30 (hex)	write	Write 01 (hex) to enable the function of the watchdog timer. Disabled is set as default.
F5 (hex)	write	Set seconds or minutes as units for the timer.
Write 0 to bit 3: set second as counting unit. [default]		
Write 1 to bit 3: set minute as counting unit.		
F6 (hex)	write	0: stop timer [default] 01~FF (hex): The amount of the count, in seconds or minutes, depends on the value set in register F5 (hex). This number decides how long the watchdog timer waits for strobe before generating an interrupt or reset signal. Writing a new value to this register can reset the timer to count with the new value.
F7 (hex)	read/write	Bit 6: Write 1 to enable keyboard to reset the timer, 0 to disable.[default] Bit 5: Write 1 to generate a timeout signal immediately and automatically return to 0. [default=0] Bit 4: Read status of watchdog timer, 1 means timer is ""time out"".
AA (hex)	-	Write this address to I/O port 2E (hex) to lock the watchdog timer.2.

A.1.3 Example Program

1. Enable watchdog timer and set 10 sec. as timeout interval

```

;-----
Mov dx,2eh ; Unlock W83627DHG-A
Mov al,87h
Out dx,al
Out dx,al
;-----
Mov al,07h ; Select registers of watchdog timer
Out dx,al
Inc dx
Mov al,08h
Out dx,al
;-----

Appendix **B**

Pin Assignments

B.1 USB Connector (USB56,USB78)

Table B.1: USB5/USB6 Connector (USB56)

Pin	USB1 Signal	Pin	USB2 Signal
1	+5 V	2	+5 V
3	LP5-	4	LP5+
5	LP5+	6	LP5-
7	GND	8	GND
9	NC	10	GND

B.2 VGA Connector (VGA1, VGA2)

Table B.2: VGA Connector (VGA1, VGA2)

Pin	Signal	Pin	Signal
1	RED	9	VCC
2	GREEN	10	GND
3	BLUE	11	N/C
4	N/C	12	SDAT
5	GND	13	H-SYNC
6	GND	14	V-SYNC
7	GND	15	SCLK
8	GND		

B.3 RS-232 Serial Port (COM1, COM2)

Table B.3: Rs-232 Serial Port (COM1, COM2)

Pin	Signal
-----	--------

Table B.3: Rs-232 Serial Port (COM1, COM2)

1	DCD
2	SIN
3	SOUT
4	DTR
5	GND
6	DSR
7	RTS
8	CTS
9	RI

B.4 RS-232 Serial Port (COM3 ~ COM6)

**Table B.4: RS-232 Serial Port (COM34)**

Pin	Signal	Pin	Signal
1	DDCD3_N	2	DDSR3_N
3	RRXD3	4	RRTS3_N
5	TTXD3	6	CCTS3_N
7	DDTR3_N	8	RRI3_N
9	GND	10	GND
11	DDCD4_N	12	DDSR4_N
13	RRXD4	14	RRTS4_N
15	TTXD4	16	CCTS4_N
17	DDTR4_N	18	RRI4_N
19	GND	20	GND

Table B.5: RS-232 Serial Port (COM56)

Pin	Signal	Pin	Signal
1	DDCD5_N	2	DDSR5_N
3	RRXD5	4	RRTS5_N
5	TTXD5	6	CCTS5_N
7	DDTR5_N	8	RRI5_N

Table B.5: RS-232 Serial Port (COM56)

9	GND	10	GND
11	DDCD6_N	12	DDSR6_N
13	RRXD6	14	RRTS6_N
15	TTXD6	16	CCTS6_N
17	DDTR6_N	18	RRI6_N
19	GND	20	GND

B.5 PS/2 Keyboard/ Mouse Connector (KBMS1)

**Table B.6: PS/2 Keyboard/ Mouse Connector (KBMS1)**

Pin	Signal	Pin	Signal
1	KB DATA	2	NC
7	MS DATA	6	NC
3	GND	8	NC
4	VCC	9	GND
5	KB CLOCK	10	VCC
11	MS CLOCK	12	NC

B.6 Power LED & Keyboard Lock Connector (JFP3)

You can use an LED to indicate when the single board computer is on. Pin 1 of JFP3 supplies the LED's power, and Pin 3 is the ground.

**Table B.7: Power LED and Keylock Connector (JFP3)**

Pin	Function
1	LED power (+5 V)

Table B.7: Power LED and Keylock Connector (JFP3)

2	NC
3	GND
4	KEYLOCK#
5	GND

B.7 External Speaker Connector (JFP2/ SPEAKER)

The single board computer has its own buzzer. You can also connect it to the external speaker on your computer chassis.

**Table B.8: External Speaker Connector (JFP2/SPEAKER)**

Pin	Signal	Pin	Signal
1	SPK+	2	HDDLED+
3	NC	4	HDDLED-
5	SPK_IN	6	SMB_DAATA
7	SPK-	8	SMB_CLK

B.8 Reset Connector (JFP1/ RESET)

**Table B.9: Reset Connector (JFP1/ RESET)**

Pin	Signal
1	PWR_BTN#
2	GND
3	RESET
4	GND

B.9 HDD LED Connector (JFP2/ HDDLED)

Table B.10: HDD LED Connector (JFP2/ HDDLED)

Pin	Signal
2	HDDLED+
4	HDDLED-

B.10 ATX Soft Power Switch (JFP1/ PWR_SW)

Table B.11: ATX Soft Power Switch (JFP1/ PWR_SW)

Pin	Signal
1	PWR-BTN
2	GND

B.11 AC-97 Audio Interface (FPAUD1)

Table B.12: AC-97 Audio Interface (FPAUD1)

1 MIC-IN	2 GND
3 MIC_VCC	4 VCC
5 LRR	6 LOUT_R
7 JDO	8 NC
9 LRL	10 LOUT_L

B.12 SM Bus Connector (JFP2)

Table B.13: SM Bus Connector (JFP2)

Pin	Signal
6	SMB_DATA
8	SMB_CLK

B.13 System I/O Ports

Table B.14: System I/O Ports

Addr. range (Hex)	Device
000-01F	DMA controller
020-021	Interrupt controller 1, master
022-023	Chipset address
040-05F	8254 timer
060-06F	8042 (keyboard controller)
070-07F	Real-time clock, non-maskable interrupt (NMI) mask
080-09F	DMA page register
0A0-0BF	Interrupt controller 2
0C0-0DF	DMA controller
0F0	Clear math co-processor
0F1	Reset math co-processor
0F8-0FF	Math co-processor
1F0-1F8	Fixed disk
200-207	Game I/O
290-297	On-board hardware monitor
2F8-2FF	Serial port 2
300-31F	Prototype card
360-36F	Reserved
380-38F	SDLCm bisynchronous 2
3A0-3AF	Bisynchronous 1
3C0-3CF	Reserved
3D0-3DF	Color/graphics monitor adapter
3F0-3F7	Diskette controller
3F8-3FF	Serial port 1
4E0~55F	General Purpose Decoder (Serial Port 3~6)

B.14 DMA Channel Assignments

Table B.15: DMA Channel Assignments

Channel	Function
0	Available
1	Available
2	Floppy disk (8-bit transfer)
3	Available
4	Cascade for DMA controller 1
5	Available
6	Available
7	Available

B.15 Interrupt Assignments

Table B.16: Interrupt Assignments

Priority	Interrupt#	Interrupt Source
1	NMI	Parity error detected
2	IRQ0	Interval timer
3	IRQ1	Keyboard
-	IRQ2	Interrupt from controller 2 (cascade)
4	IRQ8	Real-time clock
5	IRQ9	Cascaded to INT 0A (IRQ 2)
6	IRQ10	Serial communication port 3, 5 (sharing)
7	IRQ11	Serial communication port 4, 6 (sharing)
8	IRQ12	PS/2 mouse
9	IRQ13	INT from co-processor
10	IRQ14	Primary IDE Channel
12	IRQ3	Serial communication port 2
13	IRQ4	Serial communication port 1
14	IRQ5	Release
15	IRQ6	Diskette controller (FDC)
16	IRQ7	Release

B.16 1st MB Memory Map

Table B.17: 1st MB Memory Map

Addr. range (Hex)	Device
E0000h - FFFFFh	BIOS
CC000h - DFFFFh	Unused
C0000h - CBFFFh	VGA BIOS
A0000h - BFFFFh	Video Memory
00000h - 9FFFFh	Base memory

B.17 PCI Bus Map

Table B.18: PCI Bus Map				
Function Signals	Device ID		INT# pin	GNT REQ
PCI slot 1	AD31	1	INT B, C, D, A	SNT0 REQ0
